

Subject No. 40 Flight Planning (Aeroplane)

NOTE: This syllabus is based on *Flight Planning for an oceanic IFR flight for a multi engine turbine air transport type aeroplane*.

Assessment of this syllabus will be predominantly based on the specific published 'representative' aircraft performance data and appropriate computer generated flight plans. However when required, instruction and assessment should be based on generic or other type specific data.

Appropriate preliminary information is defined as that information contained in the published data pack or that information embedded into individual assessment questions e.g. flight plan components, weather data, additional performance or related 'fuel policy' data.

Each subject has been given a subject number and each topic within that subject a topic number. These reference numbers will be used on knowledge deficiency reports and will provide valuable feedback to the examination candidate. These reference numbers can be common across the subject levels and therefore may not be consecutive.

This syllabus assumes a knowledge and understanding already attained at:

- PPL and CPL syllabus level
- Instrument rating (IR) Flight Navigation syllabus level
- Basic Turbine Knowledge syllabus level.

Any item containing components existing in another syllabus indicates a higher level of understanding is required and/or the advanced practical application of the item is to be considered.

Sub Topic	Syllabus Item
	Flight Planning Concepts
40.2	Definitions
40.2.2	Define and explain the use of the following terms in the correct context (include appropriate fuel reserves where applicable): <ul style="list-style-type: none">(a) inflight revised point of safe return (revised PSR)(b) PNR factor(c) equi-time point (ETP)(d) diversion decision point (DDP)(e) extended diversion time operations (EDTO)(f) performance deterioration allowance (PDA)(g) contingency fuel(h) point of safe return (PSR)(i) ISA and temperature deviation (e.g. ISA +10).
40.4	Extended Diversion Time Operations (EDTO)
40.4.2	Explain the concept of EDTO.
40.4.4	Describe the aircraft requirements for EDTO.
40.4.6	Explain the route and aerodrome requirements applicable to EDTO.
40.4.8	Explain the critical fuel requirements for EDTO.

Sub Topic	Syllabus Item
40.4.10	Describe the engine failure descent options (Terrain/Fuel critical drift down and Standard drift down) and explain when/why they would be used.
	Flight Planning
	<i>NOTE: This syllabus requires an understanding of both the ground flight planning phase and the inflight use of a CFP (computer generated flight plan) including the management of inflight planning contingencies.</i>
40.8	Cruise
40.8.2	Define: <ul style="list-style-type: none"> (a) MOCA (b) route MORA (c) grid MORA
40.8.4	Explain the term safety height (SH) as shown on a flight plan.
40.14	Fuel
40.14.2	Given appropriate preliminary information, including ZFW and mid-hold weight as applicable, use representative aircraft data to determine: <ul style="list-style-type: none"> (d) sector fuel consumption (e) hold and approach consumption (f) total flight fuel consumption (g) alternate and reserve fuel requirements (h) contingency fuel (i) total ramp fuel required for departure.
40.18	Return Points
40.18.2	Given appropriate preliminary information, use representative aircraft data (include appropriate final reserves where applicable) to determine the inflight revised point of safe return (revised PSR).
40.20	Diversion decision point
40.20.2	Explain for a DDP flight plan, its: <ul style="list-style-type: none"> (a) identification (b) function (c) application
40.22	Flight data extraction
40.22.2	Given a computer-generated flight plan and representative aircraft data, obtain the following: <ul style="list-style-type: none"> (a) navigation data base validity (b) type of plan (e.g. standard, EDTO, DDP etc) (c) planned type of cruise profile (e.g. CI/high speed/low level etc) (d) planned initial cruise level (e) planned time/distance/fuel to the initial cruise level (f) sector times and distances (g) planned step-climb points (h) planned EET between any enroute waypoint pairs

Sub Topic	Syllabus Item
	<ul style="list-style-type: none"> (i) planned ground speeds and Mach numbers (j) planned waypoint and sector wind/temp (k) planned EET to destination (l) planned AUW at any enroute waypoint and at destination (m) time/distance to planned ETPs (n) minimum fuel required at planned ETPs (o) estimated fuel available at planned ETPs (p) plan fuel components not included in the fuel required (FUELRQ) figure (q) identify any limiting weight factor (TOW, ZFW, or LDW) (r) any specified EDTO enroute alternates as applicable (s) airspace/FIR boundary points and what national airspace the aircraft is flying through (t) sector safety height (SH).
40.22.4	<p>Given a computer-generated flight plan and representative aircraft data, extract and interpret the information contained in the following flight plan blocks:</p> <ul style="list-style-type: none"> (a) route description (b) fuel summary (c) contingency summary (d) critical fuel summary (e) alternate summary (f) time/fuel summaries for ZFW change.
40.22.6	<p>Given a computer-generated flight plan and representative aircraft data, obtain any of the following based on specified appropriate in-flight time, weight, and fuel performance information:</p> <ul style="list-style-type: none"> (a) estimated time/distance/fuel to the initial cruise level (TOC) (b) ETA for planned step-climb points (c) ETA at any enroute waypoint (d) ETA at destination (e) estimated AUW at any waypoint, and at destination (f) estimated time/distance to ETPs (g) estimated minimum fuel required at ETPs.
40.22.8	<p>Given a computer-generated flight plan and appropriate in-flight times, weight, and fuel performance information extract the planned and actual:</p> <ul style="list-style-type: none"> (a) average fuel flow for each phase of the flight (b) fuel used to an enroute waypoint (c) fuel required from a waypoint to destination (d) contingency fuel status (e) DDP fuel status (f) the availability of extra holding fuel (g) diversion fuel status

Sub Topic	Syllabus Item
	(h) minimum reserve fuel status
	(i) critical ETP fuel status
	(j) total fuel required
	(k) landing weight status.

Revision Calculations

40.24 Revised ETP calculations

40.24.2 Given a computer-generated flight plan, representative aircraft data and appropriate in-flight time, weight, and fuel performance information, calculate the following:

- (a) ETP for a revised enroute alternate pair
- (b) ETP fuel/time to a revised ETP enroute alternate pair.

40.26 Revised alternate, flight level and speed calculations

40.26.2 Given a computer-generated flight plan, representative aircraft data and appropriate in-flight time, weight, and fuel performance information, derive the following:

- (a) fuel required for a revised destination alternate
- (b) time/fuel required for a lower level flight
- (c) time/fuel required for a high or low speed flight
- (d) time/fuel required for an increased hold requirement at the destination.
